KIAUH v6.0.0-alpha1 is available now!      |
-----|
View Changelog: https://git.io/JnmlX      |
|
KIAUH v6 was completely rewritten from the ground up. |
It's based on Python 3.8 and has many improvements.  |
|
NOTE: Version 6 is still in alpha, so bugs may occur! |
Yet, your feedback and bug reports are very much    |
appreciated and will help finalize the release.      |
-----|
Would you like to try out KIAUH v6?          |
1) Yes                                         |
2) No                                         |
3) Yes, remember my choice for next time      |
4) No, remember my choice for next time      |

##### Perform action: |
```

## Mein Tipp:

Um jetzt nicht den Überblick zu verlieren, installiere zuerst die absoluten Grundlagen: **Klipper**, **Moonraker** und **Mainsail**.

Gib also wie gesagt **1**, ein und drücke Enter, um die Installation zu starten.

## Was bedeuten die anderen Optionen?

- **5) KlipperScreen:** Dies ist für Leute, die einen Touchscreen direkt am Raspberry Pi angeschlossen haben, um den Drucker ohne Laptop oder Handy zu steuern. Da du eine Weboberfläche nutzen willst, brauchst du das nicht.

- **6) OctoPrint:** Dies ist eine alternative Benutzeroberfläche zu Mainsail. Du solltest dich für eine der beiden entscheiden. Da wir bereits Mainsail empfohlen haben, kannst du OctoPrint ignorieren.
- **7) PrettyGCode:** Eine Erweiterung für die Benutzeroberfläche, die dir den G-Code optisch aufbereitet. Ein nettes Gimmick.
- **8) Telegram Bot, 9) Obico, 10) OctoEverywhere, 11) Mobileraker, 12) OctoApp:** Das sind alles Dienste, die dir helfen, deinen Drucker auch von unterwegs aus zu steuern und zu überwachen (oft mit Smartphone-Apps). Das sind Features für später.
- **13) Spoolman:** Ein Tool, um deinen Filamentbestand zu verwalten. Das hat nichts direkt mit dem Drucken zu tun.
- **14) Crowsnest:** Das ist der Webcam-Streamer, den du brauchst, um deine Pi-Kamera einzubinden. Das ist eine sehr nützliche Erweiterung, die wir später installieren können, wenn die Grundfunktionen laufen.

```

=====
WARNING: Your current user is not in group:
• tty

It is possible that you won't be able to successfully
connect and/or flash the controller board without
your user being a member of that group.
If you want to add the current user to the group(s)
listed above, answer with 'Y'. Else skip with 'n'.

INFO:
Relog required for group assignments to take effect!
=====
##### Add user 'klipper' to group(s) now? (Y/n):
dvsvdv

```

a, gib **Y** ein und drücke **Enter**.

Das ist wichtig, damit der Klipper-Benutzer auf die Hardware-Schnittstelle deines Druckers zugreifen kann. Das Hinzufügen zu dieser Gruppe verhindert Verbindungsprobleme.

```

C:\Users\David\.platformio\packages\toolchain-atmelavr\bin>

klappt auch nicht wir werden nun Arduino IDE testen

<https://www.arduino.cc/en/software/>

wo wir dabei sind der step back ist ja auch immer ein guter plan

<https://github.com/MarlinFirmware/Configurations/tree/bugfix-2.1.x/config/examples/Artillery/Genius/V1>

wichtig !

NotPlatformIOProjectError: Not a PlatformIO project. `platformio.ini` file has not been found in current working directory (C:\Users\David\Downloads\Marlin-bugfix-2.1.x). To initialize new project please use `platformio project init` command

platformio run

\_Bootscreen.h

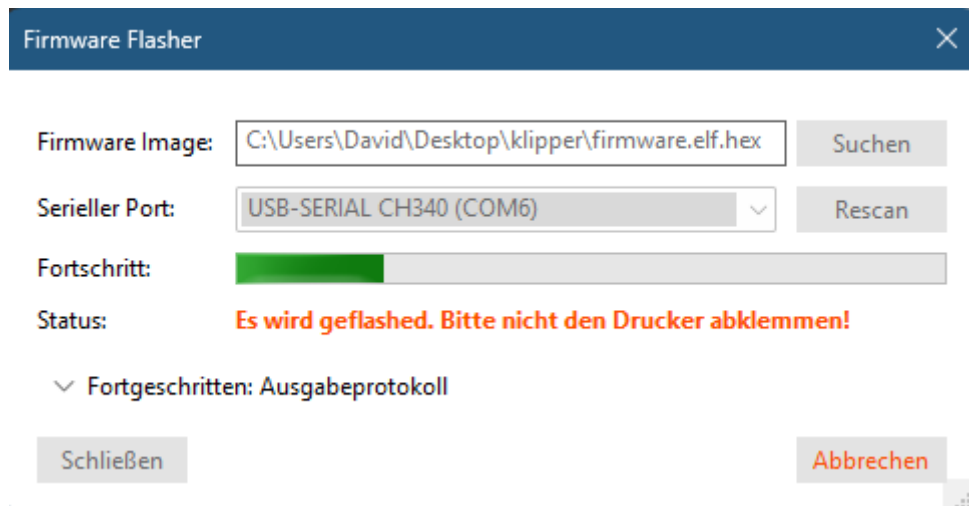

mega2560 SUCCESS 00:00:44.029

```

=====
```

PS C:\Users\David\Downloads\Marlin-bugfix-2.1.x\Marlin-bugfix-2.1.x>

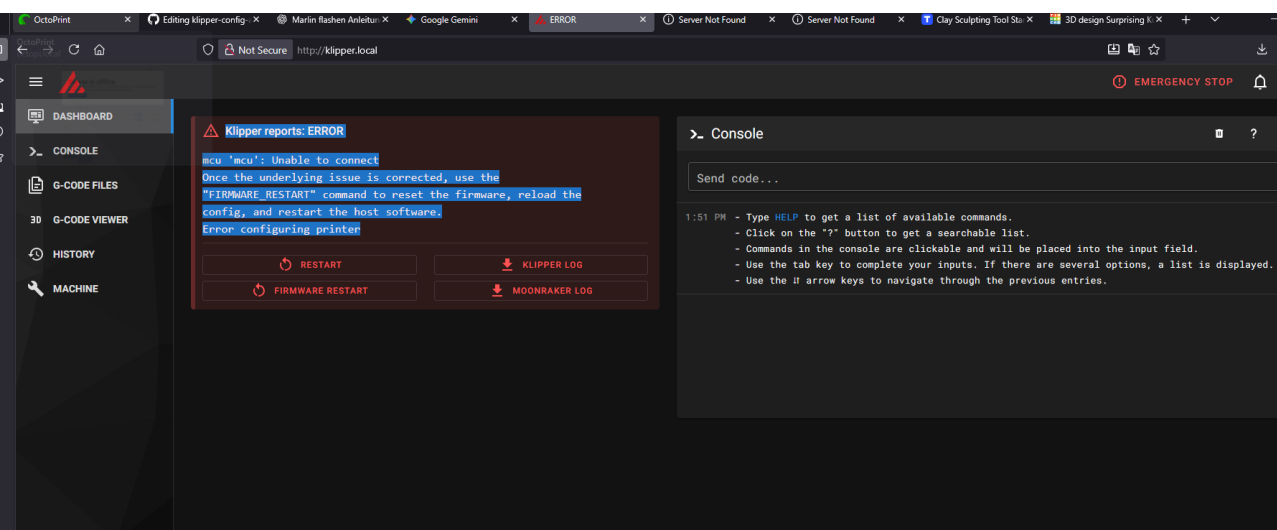

also

versuchen wir mal die hex datai per prusa dadrauf zu bekommen !  
Dsdv

bfbfdb

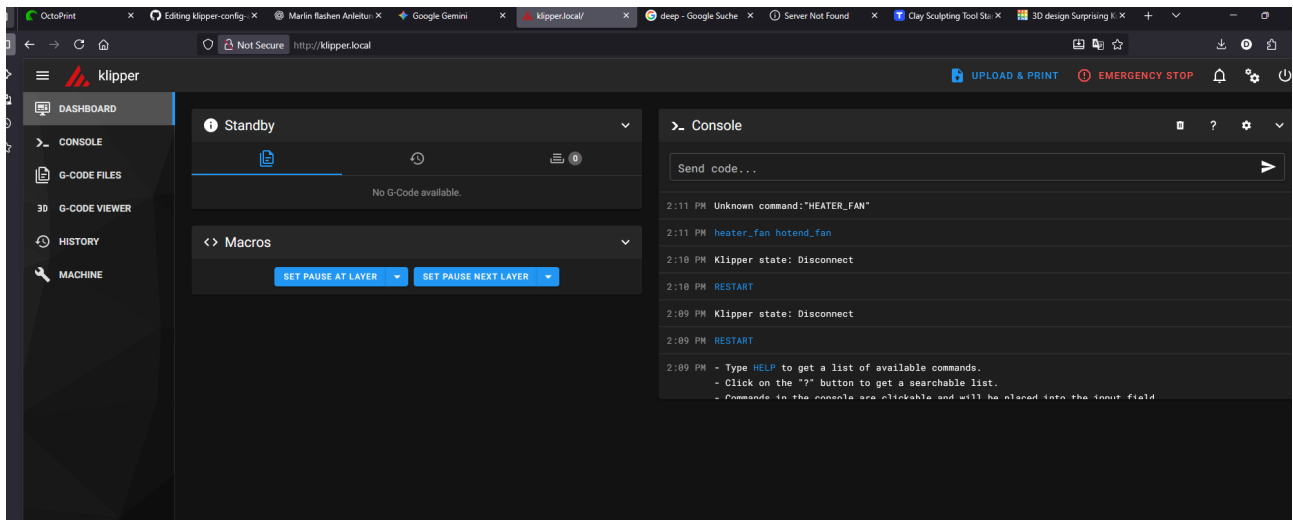

<http://klipper.local/> oder <http://192.168.0.107/>

so web ist erreichbar nun das config file wo es ja bekanntlich die meisten probleme gibt

## Klipper reports: ERROR

Unable to parse option 'max\_velocity' in section 'printer'

Once the underlying issue is corrected, use the "RESTART" command to reload the config and restart the host software.  
Printer is halted

<https://github.com/MarlinFirmware/Configurations/tree/bugfix-2.1.x>

Großartig! Ein Benchy ist der perfekte erste Druck, um deine neue Klipper-Einrichtung zu testen.

Bevor du den Druck startest, musst du sicherstellen, dass dein Drucker optimal eingestellt ist, um Fehler oder Schäden zu vermeiden.

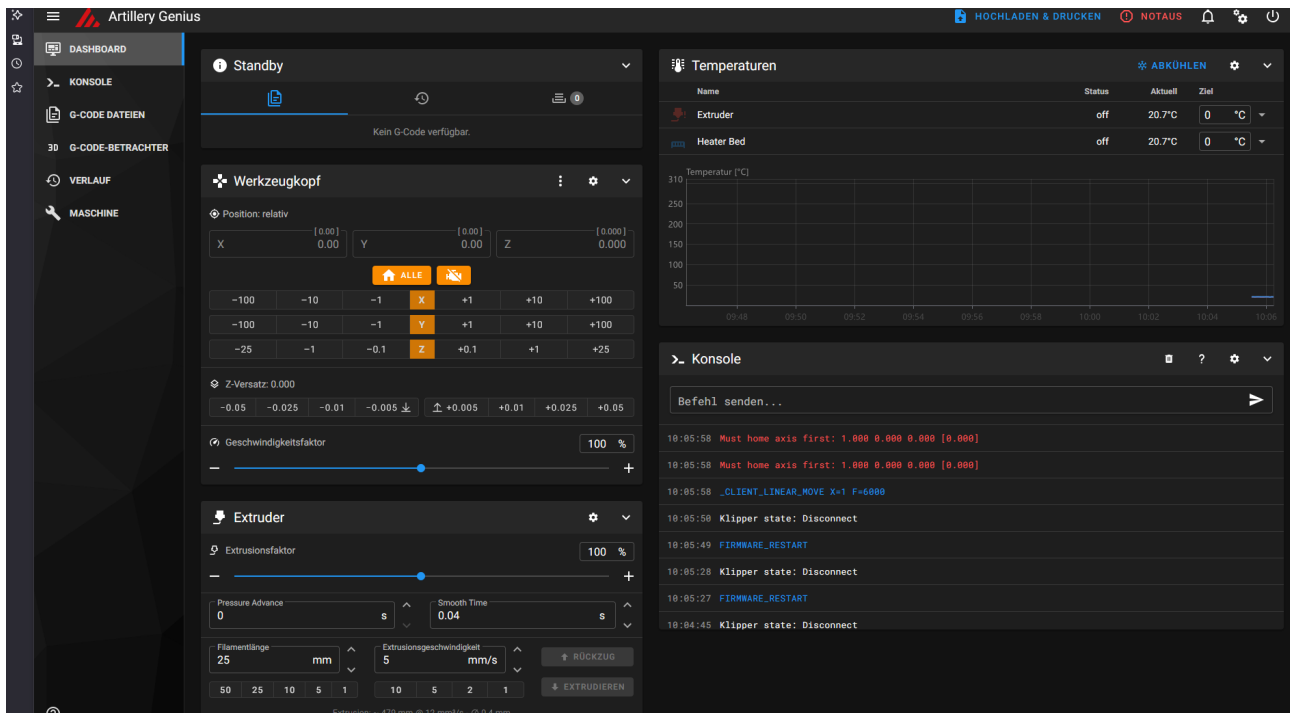

# 1. Wichtige Vorbereitung

## ⚠ Z-Offset final einstellen

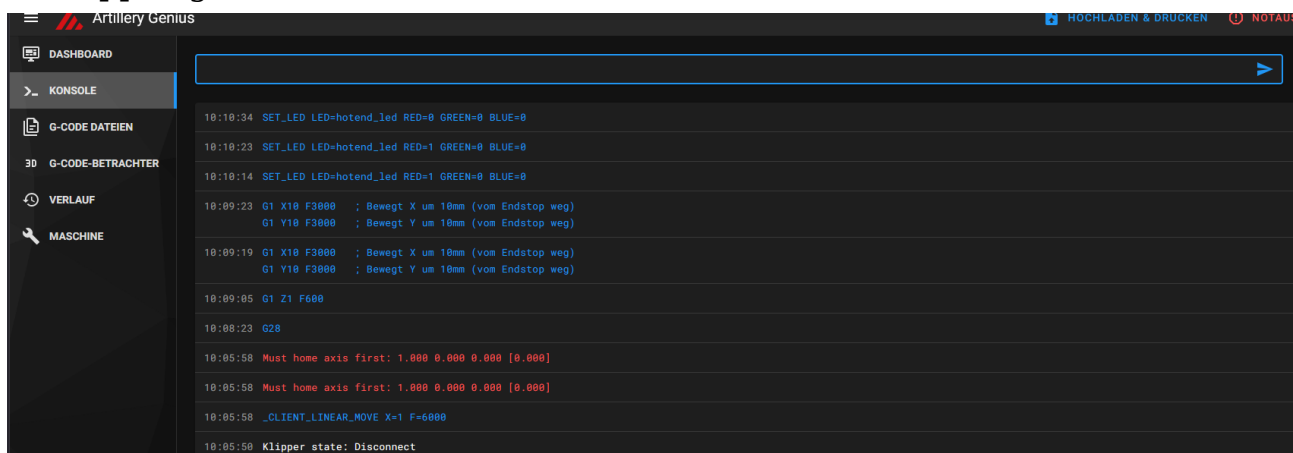

Da der Drucker noch nicht gedruckt hat, ist dies der **allerwichtigste** Schritt, um zu verhindern, dass die Düse in das Druckbett kratzt!

1. **Homing:** Sende G28 in die Konsole.
2. **Offset finden:** Verwende die manuelle Steuerung, um die Düse so weit abzusenken, bis ein Stück Papier zwischen Düse und Bett leicht hakt.
3. **Offset speichern:** Wenn du den Wert (z. B. -0.25) gefunden hast, speichere ihn dauerhaft mit:

G-Code

klappt irgendwie doch über die oberfläche

hotend\_fan pin: ar7// aber keine power ? 24V oder ?

ar5 grüne led

ar6 blaue led

Bauteillüfter pin: ar9

Dann hast du jetzt:

- **Hotend-Lüfter** und **Bauteillüfter** korrekt auf eigenen Pins → laufen sauber.
- **RGB-SMD-LEDs** als [output\_pin] → nur an/aus, kein Flackern.
- **Makros für LED-Farben** bereit → schnelle Kontrolle über GCode.

G28

M104 S200

M140 S60

Filament Sensor filament: filament detected

11:26:31

QUERY\_FILAMENT\_SENSOR SENSOR=filament

```
PRINT_START BED_TEMP=[first_layer_bed_temperature]  
EXTRUDER_TEMP=[first_layer_temperature]
```

```
END_PRINT
```

**FILAMENT\_UNLOAD****Filament Entladen**Funktioniert korrekt: heizt auf 230°C, fährt **relativ** 100 mm zurück, dann zurück auf **absolut** (G90).  
**FILAMENT\_LOAD****Filament Laden**Funktioniert korrekt: heizt auf 230°C, fährt **relativ** 125 mm vor, macht einen kleinen **Retract** von 2 mm und geht dann zurück auf **absolut** (G90).  
**LED\_GRUEN****LED Grün**Korrekt: Schaltet Grün an, Rot und Blau aus.  
**SMART\_HOME****Homing mit Parken****Logik-Problem:** Führt G28 aus. **Direkt danach** fährt es auf X3 Y3 Z5 und schaltet die LED grün. Die Park- und LED-Aktion sollte **aus diesem Makro entfernt** werden, da es nur fürs Homing zuständig sein sollte (siehe Empfehlung unten).  
**FAHRE\_AUF\_NEUTRALE\_POSITION****Neutrale Position****Redundant:** Ruft SMART\_HOME auf, was bereits parkt. Fährt dann von X3 Y3 Z5 **erneut** zu X3 Y3 Z5 und dann zu Z10.
